Message from the CEO

The Saint Agnes Cancer Institute offers a multidisciplinary approach to treating the disease, caring for our patients and supporting their families, all centered on respect, compassion and excellence in comprehensive care. Our physicians and staff work as a team to meet our goals in both quality of care and patient satisfaction. We expect to excel in both and have successfully met those objectives.

With some targeted philanthropic support, we have a new facility that offers patients multiple options for treatment coupled with interior and exterior designs that bring nature and peacefulness into the environment.

A cancer diagnosis can be challenging for our patients, but with excellent physicians, technology and access to proven or research driven protocols, our cancer patients can become cancer survivors and that is why all of us are in healthcare.

Bonnie Phipps, President and CEO
This has been a very exciting year for The Saint Agnes Cancer Institute. We moved into our newly constructed, beautiful, patient centered building, where we provide all facets of oncology care. The Angelos Medical Pavilion houses medical and radiation oncology, The Center for Blood Disorders, thoracic, hepatobiliary, gastrointestinal and gynecologic oncology. The Healing Garden, located outside the chemotherapy treatment room, provides a serene backdrop for patients receiving chemotherapy. The Comprehensive Breast Center remains easily accessible to our patients.

Patient care at Saint Agnes is guided by our mission of caring, which has been the cornerstone of Saint Agnes since its inception and remains the heart of the hospital’s culture. This mission has created a spirit of cooperation, collegiality and, above all, compassion that ensures patients the best possible care. At The Saint Agnes Cancer Institute, our patients find a team of specialists, advanced technology, and the most current national evidence-based treatment for nearly every type of cancer. Our multidisciplinary approach was established many years ago by the physicians themselves. Each week, all of the specialists involved in the patient’s care gather for tumor board meetings to develop treatment plans, utilizing the most current national treatment guidelines. These specialists include those who treat the physical needs, and those who treat the emotional and spiritual needs of the patient - medical oncologists, surgical oncologists, gynecologic oncologists, radiation oncologists, general surgeons, plastic surgeons, pathologists, nurses, patient navigators, pharmacists, social workers, spiritual counselors, nutritionists and others. Our talented and dedicated associates have access to high-tech and highly evolved strategies to fight cancer – now in a fresh, new, welcoming environment. At The Saint Agnes Cancer Institute we have built our team of professionals with our patients’ needs at the forefront. Beside treatment, they provide services from education and prevention to hospice and survivorship. Our academic learning environment allows physicians to design a treatment plan that provides the best possible patient outcome. Our support services team provides encouragement and assistance to patients and their families as needed along their journey.

The Saint Agnes Cancer Institute is recognized by many organizations that are dedicated to improving cancer outcomes, cancer care, and the quality of life of cancer patients. From the American College of Surgeons Commission on Cancer (CoC), our cancer program has earned the Outstanding Achievement Award, which is their highest honor. We have also attained their highest level of official approval of cancer programs, 3-Year Accreditation with Commendation. Our Breast Center was one of the first programs in the nation to achieve accreditation by the National Accreditation Program for Breast Centers. The American Society of Clinical Oncologists conferred their Quality Oncology Practice Initiative Certification to our program. This certification is awarded to cancer programs that are committed to delivering the highest quality of cancer care. Our Radiation Oncology department is accredited by the American College of Radiology.

Those associate with The Saint Agnes Cancer Institute strive to develop the best treatment options and programs for all patients who come through our doors. I am extremely proud to be associated with this well-respected team of dedicated professionals.

Carole Miller, M.D., Director Of The Saint Agnes Cancer Institute
About the Cancer Institute

The Saint Agnes Cancer Institute
Attacking Cancer From Every Angle.

Our multidisciplinary team approach to cancer treatment is tailored individually for all of our patients, providing them with the most accurate diagnoses and personalized, comprehensive treatment plans.

Saint Agnes Hospital is a leader in Maryland in the battle against cancer. Our brand new Baltimore facility utilizes evidence-based medicine and clinical practice in this battle. This means using the best known clinical evidence from national, patient based, research coalitions, in combination with our providers’ own clinical expertise. Our Institute believes in continuous quality assurance. Many times every year, our treatment options of chemotherapy, radiation, surgery, hormone and immunotherapy undergo meticulous studies to ensure that our patients are evaluated and treated according to evidence-based national treatment guidelines. Our approach is as steadfast as our goal to turn every cancer patient into a cancer survivor.

Next: New Patient Orientation
The Oncology Patient Navigators at The Saint Agnes Cancer Institute recognized that there was a need to bring calming support and encouragement to what is a frightening and stressful situation: receiving the diagnosis of cancer, trying to comprehend what is the best next step. From this came the innovative creation and implementation of the New Patient Orientation Visit, the NPOV.

The NPOV is an individualized meeting with the patient, family members, significant others, and our Support Services Team. It is designed as a primary source for educating the patient and all those traveling the cancer journey with the patient. It serves as an appropriate platform in which to identify patient distress and barriers to care. It gives the patient the tools to become a partner in treatment and decisions affecting his or her personal outcome.

Prior to beginning chemotherapy or dual modality treatment with chemotherapy and radiation therapy, patients are scheduled for a one hour NPOV appointment with the Support Services Team. The members of the team are an Oncology Social Worker, an Oncology Nurse Navigator, and the American Cancer Society Patient Navigator. Each patient receives an educational binder that contains a standard core of information about cancer along with specific material based on the patient’s diagnosis and the oncologist’s plan of treatment. The patient is guided through the resource binder as the material is taught.

“This orientation was wonderful. I had so much anxiety and fear. I left with a feeling of comfort and support. Many questions, important to me and my family were answered.”

At the beginning of the NPOV appointment, the patient completes the National Comprehensive Cancer Network (NCCN) Distress Tool. Next, the Social Worker meets with the patient to discuss any areas of concern such as distress, anxiety, Advanced Directives, finances, family issues. The American Cancer Society Patient Navigator provides ACS materials and resources as appropriate, such as gas cards, transportation, and identifies support resource such as Peer-to-Peer match programs, local support groups, and image recovery resources. The Oncology Nurse Navigator discusses any concerns the patient identified on the Distress Tool. The necessity for a nutritional consult is identified and referral made at this time.
New Patient Orientation Continued

“I have never been so impressed with the care and compassion of a group of people.”

The Nurse Navigator then uses this time to educate the patient, family and support members about the patient’s treatment, names of medicines, cycles of treatment, how the treatment will be administered, expected length of treatment, the patient’s schedule of appointments. An important segment of the NPOV is education regarding side effect and symptom management, and when the patient should call the doctor. The NPOV materials include important information to provide to clinicians related to neutropenia and infection, in the event the patient needs to be seen in the emergency department.

The complexity of oncology care demands an organized, multidisciplinary approach. The NPOV coordinates communication among providers and patients, includes key family members, and improves adherence to medical advice. The NPOV program reduces patient fear, provides patient and family comfort, gives a clearer understanding of the diagnosis and treatment process, resulting in more successful patient outcomes.

Patient response to the NPOV has been overwhelmingly positive. The departmental survey indicates patient satisfaction related to the NPOV achieved 100% since the implementation of the NPOV.

“The NPOV was extremely helpful to me. I am feeling a little more at ease now about beginning my chemo treatments. The support services team was very helpful explaining the programs available to me, the things that I can expect to happen, and they have instilled confidence in me.”
Community Outreach: Breast Link Program

The Saint Agnes Hospital Breast Link Program assures that noninsured and underinsured women in the communities surrounding Saint Agnes Hospital have access to the tools and resources needed for seamless and convenient breast and medical care. The Breast Link Program strives to make breast health a priority, and to raise awareness about the importance of breast health. This program makes it easy for women to obtain breast exams and mammograms. Our goal is to provide breast health information to more than 5,000 women in our community, with 300 no-cost mammograms offered to those who opt to fully participate in the program.

Through this program, women aged 40 and over receive important information about breast health. A Breast Connector helps make appointments. A physician provides clinical breast exams, mammograms, and the results, all in the course of a single day at no cost to the participant. We can even provide complimentary transportation, from home to our front door, and back to home.

A Breast Link Buddy stays with the participant during her entire visit with us. She manages the participant’s schedule for the day, introduces her to members of our team, and even treats her to lunch!

The Breast Link Program provides a “home base” at the Saint Agnes Cancer Institute for current and future health needs. We are the place to turn to when answers are needed. When clinical exams and mammograms are normal, we send a letter with a reminder to schedule a mammogram every year. If we find something to be concerned about, we help coordinate follow up appointments in The Saint Agnes Hospital Comprehensive Breast Center.

The Breast Link Program is recognized as a partnership between Saint Agnes Hospital and the Maryland Affiliate of Susan G. Komen for the Cure, created to expand breast health awareness and increase the number of breast screenings within Baltimore City.

Continued on next page.
Community Outreach: Breast Link Program
Process and Outcome

Community Outreach
- 4 High Schools
- 126 Salons - Shop Talk
- 500 Doors knocked on
- 4 Subsidized Housing presentations
- 12 Corner Markets
- 17 Liquor Stores & Bars
- 118 Churches contacted

Community Response
- 152 Women called Breast Link
- 12 Churches on Board
- 9 Shop Talk Ambassadors trained

Qualifiers
- Age
- Zip Code
- Date of Last Mammogram
- Insurance Status

Connector
- Appointment
- Diamond Cab
- Lunch
- Breast Buddy

Baltimore Medical Systems
- Health Benefits Advisor
- Health Leads
- Wellness Exam
- Clinical Breast Exam

Seton Imaging
- Welcome & Comfort
- Expectation Management
- Mammogram
- Radiologist

Navigation
- Follow Up
- Diagnostic Needs
- Financial Needs
- Social Work
- Nurse Navigation

Referrals
- Saint Agnes Breast Center
- Breast & Cervical Cancer
- Expanded Care Program

Results
- 52 women linked to program
- 33 women completed process
- 13 women referred out
- 6 biopsies
- 1 Cancer

Support for Our Patients and Their Families

The Saint Agnes Cancer Institute understands that fighting cancer can affect not only a patient’s physical condition but his or her emotional and spiritual state as well. The families of cancer patients are also affected during treatment. It is for these reasons that The Saint Agnes Cancer Institute offers a comprehensive support network for our patients and their families.
